ABSTRACT

This fifth grade environmental education guide is one of a series of guides, K-12, which were developed by teachers to help introduce environmental education into the total curriculum. The guides are supplementary in design; it is the teacher's decision when the concepts, objectives, activities, and resources may best be integrated into the existing classroom curriculum. This guide contains a series of episodes (mini-lessons), each having a number of suggested in- and out-of-class learning activities. The episodes are built around 12 major environmental concepts that form a framework for each grade or subject area, as well as for the entire K-12 program. Although the same concepts are used throughout the K-12 program, emphasis is placed on different aspects of each concept at different grade levels. The fifth grade guide focuses on aspects such as sun, energy, ecosystems, industrial growth, speech, and urban aesthetics. Each of the 12 concepts is covered in one of the episodes contained in the guide. Further, each episode offers subject area integration, subject area activities, interdisciplinary activities, cognitive and affective behavioral objectives, and suggested references and resource materials useful to teachers and students. An appendix containing related games is included. (Author/TK)

BEST COPY AVAILABLE

In 1969, the First Environmental Quality Education Act was proposed in the United States Congress. At the time of the introduction of that legislation, I stated:

"There is a dire need to improve the understanding by Americans of the ominous deterioration of the Nation's environment and the increasing threat of irreversible ecological catastrophe. We must all become stewards for the preservation of life on our resource-deficient planet."

In the three years since the Environmental Education Act was passed by the Congress, much has happened in the United States to reinforce the great need for effective environmental education for the Nation's young people. The intensive concern over adequate energy resources, the continuing degradation of our air and water, and the discussion over the economic costs of the war against pollution have all brought the question of the environmental quality of this nation to a concern not merely of aesthetics but of the survival of the human race.

The intense interest by the public in the quality of our lives

as affected by the environment clearly indicates that we cannot just use incentives and prescriptions to industry and other sources of pollution. That is necessary, but not sufficient. The race between education and catastrophe can be won by education if we marshal our resources in a systematic manner and squarely confront the long-term approach to saving our environment through the process of education.

As the incessant conqueror of nature, we must reexamine our place and role. Our world is no longer an endless frontier. We constantly are feeling the backlash from many of our ill-conceived efforts to achieve progress.

Rachel Carson's theme of "reverence for life" is becoming less mystical and of more substance as our eyes are opened to much of the havoc we have wrought under the guise of progress. A strong commitment to an all-embracing program of environmental education will help us to find that new working definition of progress that is a pre-requisite to the continued presence of life on this planet.

- Senator Gaylord Nelson

PREFACE

Teach environmental education???

If I only knew how...
If I only had time...

Is this your dilemma...

No time to research...
No time to plan...
No materials...

This guide to environmental education,
written by teachers, for teachers, with
your students in mind, is the answer
to your dilemma.

Each lesson, complete with behavioral
objectives, procedures for student
centered activities both in and out of
the classroom and supplementary
materials, utilizes an integrated
approach.

Teach environmental education???

Of course you can!!!

DIRECTIONS FOR USING THIS GUIDE

This guide contains a series of episodes (mini-lesson plans), each containing a number of suggested in and out of class learning activities. The episodes are built around 12 major environmental concepts that form a framework for each grade or subject area, as well as for the entire K-12 program. Further, each episode offers subject area integration, multi-disciplinary activities, where applicable, both cognitive and affective behavioral objectives and suggested reference and resource materials useful to the teacher and students.

1. This I-C-E guide is supplementary in design--it is not a complete course of study, nor is its arrangement sequential. You can teach environmentally within the context of your course of study or units by integrating the many ideas and activities suggested.
2. The suggested learning activities are departures from regular text or curriculum programs, while providing for skill development.

3. You decide when any concepts, objectives, activities and resources can conveniently be included in your unit.

4. All episodes can be adapted, modified, or expanded thereby providing great flexibility for any teaching situation.

5. While each grade level or subject area has its own topic or unit emphasis, inter-grade coordination or subject area articulation to avoid duplication and overlap is highly recommended for any school or district seeking effective implementation.

This total K-12 environmental education series is the product of 235 classroom teachers from Northeastern Wisconsin. They created, used, revised and edited these guides over a period of four years. To this first step in the 1,000 mile journey of human survival, we invite you to take the second step--by using this guide and by adding your own inspirations along the way.

PROJECT I-C-E TWELVE MAJOR ENVIRONMENTAL CONCEPTS

1. The sun is the basic source of energy on earth. Transformation of sun energy to other energy forms (often begun by plant photosynthesis) provides food, fuel and power for life systems and machines.
2. All living organisms interact among themselves and their environment, forming an intricate unit called an ecosystem.
3. Environmental factors are limiting on the numbers of organisms living within their influence. Thus, each ecosystem has a carrying capacity.
4. An adequate supply of clean water is essential to life.
5. An adequate supply of clean air is essential for life.
6. The distribution of natural resources and the interaction of physical environmental factors greatly affect the quality of life.
7. Factors such as facilitating transportation, economic conditions, population growth and increased leisure time influence changes in land use and population densities.
8. Cultural, economic, social, and political factors determine man's values and attitudes toward his environment.
9. Man has the ability to manage, manipulate and change his environment.
10. Short-term economic gains may produce long-term environmental losses.
11. Individual acts, duplicated or compounded, produce significant environmental alterations over time.
12. Each person must exercise stewardship of the earth for the benefit of mankind.

A "Concept Rationale" booklet and a slide/tape program "Man Needs His Environment" are available from the I-C-E RMC to more fully explain these concepts.

Environmental: CONCEPT NO. <u>1-Energy</u> ORIENTATION <u>Sun Energy</u> BEHAVIORAL OBJECTIVES		Integrated with: SUBJECT <u>Science</u> TOPIC/UNIT <u>Sun Energy</u> STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Write an explanation of photosynthesis including the chemical formulae involved in the process.		In-Class: A. Starch Test 1. Place a very small amount of starch in a drop of water on a glass slide and add a drop of dilute iodine solution. What change occurs? Repeat the experiment, using sugar instead of starch. Apply this starch test to note paper, filter paper, cheesecloth, muslin, raw potato, etc. B. Storage of Starch in Leaves 1. As noted above, the presence of starch in a leave may be considered good indirect evidence of photosynthesis. Starch may be detected in leaves by the following method. Remove chlorophyll from the leaves by soaking them in hot alcohol. The process is facilitated if the leaves are first briefly immersed in boiling water (tie a long thread to the petioles in order to handle the leaves without risk of burns). When the chlorophyll has been removed, rinse the leaves in cool water to make them pliable. Test for starch by placing the leaves in Petri dishes adding enough iodine solution. (continued)	Outside or Community: A. Visit to local florist. (Plants growing in man-made environment.) 1. Refer to checklist of Pre and Post Field Trip procedures. 2. Pupils prepare questions they wish to ask florist, e.g. How does a plant get its food? How does the florist aid the plant to use sun energy? 3. Pupils record observations on note pads. 4. Pupils work in groups after field trip pooling their observations. One recorder from each group reports to class. B. Visit a tree nursery (plants growing in natural environment). Use same procedure as outlined above.
Affective: Verbally support the proposition that energy from the sun is converted through photosynthesis into a form all living things can use for life processes.			
Skills Used: 1. Experimenting 2. Observing 3. Keeping records 4. Organizing 5. Illustrating			

SUGGESTED RESOURCES

Publications:

Books:
Science in Action, Prentice Hall, Englewood Cliffs, N.J.
People and Their Environment, Grades 4-5-5, Unit I, p.5.

Audio-Visual:

Films:
Our Mr. Sun, 20 min., Bell System.
Riddle of Photosynthesis, 12 min., U. S. Atomic Energy Commission.

Community:

Local florist.

CONTINUED OR ADDED LEARNING ACTIVITIES

CLASSROOM (Continued)

- B. to cover them. What happens if starch is present? Apply this starch test to:
- (1) leaves picked from a plant at sunset; i.e. a plant that has been in full sunlight all day.
 - (2) leaves picked from a plant at sunrise; i.e. a plant that has been in darkness overnight.
- C. Pin a geranium leaf between 2 flat corks without removing it from the plant. After 24 hours, this leaf and another leaf that had not been pinned are tested with iodine after removing the chlorophyll (explained on first sheet).
- Result: The starch test was negative for the part of the experimental leaf from which light was excluded. Conclusion: Light is necessary for photosynthesis in geranium leaves.

Sample-Guided Learning Sheet for Geranium Leaf Test

1. What did you observe when you placed iodine on the two geranium leaves?
2. Why do you think this was the result?
3. Where did the starch from the one leaf come from?
4. Why didn't the other leaf have starch present?
5. Write a simplified chemical equation for the process of photosynthesis.
6. Write a short paragraph explaining how a plant produces starch.
7. Why are green plants so important to animal life? Explain.
8. Draw a diagram of the process of synthesis, e.g.

SUGGESTED RESOURCES

Publications:

CONTINUED OR ADDED LEARNING ACTIVITIES

CLASSROOM (Continued)

9. Write equation for photosynthesis (getting acquainted with chemistry).

Note to teacher: This formula can be read, 6 molecules of carbon dioxide plus 6 molecules of water with light energy and chlorophyll give off sugar and 6 molecules of oxygen.

Audio—Visual:

Community:

Environmental:

CONCEPT NO. 1-Energy

ORIENTATION Sun's Energy

Integrated with:

SUBJECT Mathematics - Science

TOPIC/UNIT Metric Measuring Preferred

BEHAVIORAL OBJECTIVES

Cognitive:

Collect data on amount of plant growth and construct a graph. Make predictions on the growth of a plant for a given period of time that extends beyond the observations made and graphed.

STUDENT-CENTERED LEARNING ACTIVITIES

In-Class:

- A. Graphing growth of plants.
 1. Plant two vines - grass, radishes, beans, or sunflowers in containers of soil or vermiculite. Place one in sunlight, the other in a place devoid of sunlight.
 2. Place student-made meter stick for measuring purposes into container.
 3. Graph growth on line graph in centimeters, recording date of observations.
- B. Make predictions on future growth.

Outside or Community:

Growth of vine in Centimeters

Days on which observations are made.

Affective:

Defends putting a plant in the sun over putting plant in area devoid of sunlight when growth is wanted.

Skills Used:

1. Making a line graph
2. Making and reading a meter stick
3. Learning terms lateral, terminal
4. Using metric system

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<u>Publications:</u> Darling, Lois and Louis Place in the Sun; Ecology and the Living World, Morrow 1968. <u>Audio-Visual:</u> 5553 Photosynthesis A 63 22 Minutes (\$8.75) BAVI. 6743 Green Plants and Sunlight, \$4.00, BAVI 11 Minutes. <u>Community:</u> Farm with particular vine crops. County Agent Greenhouse Gardens	For creative writing lesson on this concept, see page 11, Concept #1, Language Arts, Gr. 5. Another option would be writing three paragraphs on the graphing exercise, covering their <u>observations</u>, <u>conclusions</u> and <u>predictions of future growth</u>.

Environmental:		Integrated with:	
CONCEPT NO.	1-Energy	SUBJECT	Language Arts
ORIENTATION	Energy	TOPIC/UNIT	Creative Writing
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	In-Class:		
State the important effects of the sun on nature, in a creative writing type format.	A. View Film, "Our Mr. Sun", "Nature's Half Acre" or "A World is Born" B. Pupil writing as Mr. Sun: "How do I affect things on earth from sunrise to sunset." 1. leaf 2. child 3. a house 4. grass 5. air C. Pupils working in pairs prepare skits, e.g. Mr. Sun interviewed by a news reporter. Mr. Sun talking to a plant (daisy) an animal (dog) and a boy. Mr. Sun and Mr. Water look back over years and the changes that have taken place and why. Mr. Sun and Mother Earth. Mr. Sun and the Four Seasons. Mr. Shadow and Billy. D. Read poem "I Have a Little Shadow," by Robert Louis Stevenson.		
Affective:	Outside or Community:		
Defend the fact that things on the earth are dependent upon the sun's energy.	1. Shadows 2. Plant growth as affected by sunlight 3. Position of sun in sky and path of sun, relate this to design of school building also.		
Skills Used:			
1. Writing skills: Punctuation Capitalization Etc.			
2. Creative imagination			

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<u>Publications:</u> Films: <u>Mr. Sun</u>, Bell Telephone, 1 hour. <u>Nature's Half Acre</u> - Walt Disney Educational Materials Co., 33 min., ICE, RMC. <u>A World is Born</u> - Walt Disney Educational Materials Co., 20 min., ICE, RMC. <u>Audio-Visual:</u> Posters - bright colors. Appropriate music - suggesting sunrise-sunset. Music teacher and librarian could offer suggestions. <u>Community:</u> Local photographer could talk about the sun - its impact on camera shots, photo-effects, etc.	<u>CLASSROOM (Continued)</u> For Science - Math Experience with this concept, see Lesson #1, Sun's Energy, Metric Measuring, Gr. 5.

ORIENTATION

Temperature Reading - Sun Energy

TOPIC/UNIT

Graph Reading

BEHAVIORAL OBJECTIVES

Cognitive:

Interpret a chart showing daily growth of plants in centimeters for any given day or height included in the chart.

In-Class:

Affective:

Verbally support the proposition that energy from the sun is converted through photosynthesis into a form all living things can use for life processes.

STUDENT-CENTERED LEARNING ACTIVITIES

Outside or Community:

I. (Worksheet graph on reverse side)

A. Ask children to look at worksheet graph on next page. Explain that someone did an experiment with pea seedlings to find out how much they would grow each day at a certain temperature. Have them look at 55 degrees on the chart. At 55 degrees the seedling grew 1/2 centimeter each day. Explain that seedlings were also growing at other temperatures.

B. Have children graph the information.

C. Have children answer various questions using the graph information.

1. At what temperature did plants grow most?
2. At what temperature did the plants grow least?
3. Which temperature was the most like a cool day? Like a hot day?
4. Which temperature was best for plants?
5. What happened when the temperature was too cold? Too hot?

(Continued)

Teacher assigns an over night report consisting of three examples of how people try to control the sun's heat rays and use it to modify temperature.

Examples:

Modern Man:

1. awnings
2. tinting of glass
3. color of clothing
4. seasonal clothing
5. building design
6. heating systems
7. sun glasses
8. venetian blinds
9. closing and opening of drapes
10. suntan lotion

Primitive Man:

1. clothing
 2. use of fire
 3. shelters used
- After reports, teacher could direct discussion toward comparison of modern man's ways and primitive man's ways. "What did primitive man do to achieve some control over temperature?"

Skills Used:

1. Reading of graphs
2. Comparing
3. Observing and reporting

SUGGESTED RESOURCES

Publications:

Conditions Affecting Life,
Unit 23, ICE, RMC No. 130 Mc.

Audio-Visual:

"Graphs - Understanding and
Using Them" \$4.00, Coronet
1967, 11 min., BAVI.

Community:

Greenhouse
Gardens
Farm Areas

CONTINUED OR ADDED LEARNING ACTIVITIES

CLASSROOM (Continued)

6. When would you expect pea plants to grow best, in the winter, summer or spring?
7. What crops have you noted being affected by various temperatures?
8. How do the extreme temperatures for growing affect your life?

BEST COPY AVAILABLE

Environmental:		Integrated with:	
CONCEPT NO.	1-Energy	SUBJECT	Physical Education
ORIENTATION	Energy Sources	TOPIC/UNIT	Tumbling
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:		In-Class:	Outside or Community:
After activities 75% of the students will see the indirect dependence on the sun by orally listing an example of a food chain and physically creating one. Analyze a given sequence of plants and animals, said to be a food chain, to determine if they have all the requirements of a food chain.		Note: Following activities are illustrated in Curriculum Manual for Elementary Physical Education, Mel J. Nicks, I-C-E RMC 613 Ni, copyright by Diocesan Dept. of Education, Green Bay, Wis., 1965. I. Mat Stunts (Individual) a. Stump walk b. Log Roll c. Coffee grinder II. Mat Stunts (Dual) a. Wheelbarrow b. Double walk c. Churn the butter d. Climb around III. Tumbling (Use mats also) a. Side or puppy b. Forward roll c. One legged feather roll d. One arm roll e. Skin the snake f. Backward roll IV. Student centered - teacher directed. a. Discussion to make the children aware of the food chain they are part of and dependent on.	
Affective:			
Defend the dependence of all living things on the sun's energy. (Indirect and direct, cause and effect relationships)			
Skills Used:			
1. Strength, agility coordination of body muscles 2. Cooperation 3. Kinesthetic			

(Continued)

TOPIC/UNIT

Ecological Vocabulary

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Match ecological terms listed on page 30 with their definitions or descriptions with 90% accuracy.

A. Ecology Word Study List

Ecology Words in the Community

1. Teacher and students draw up a list of ecological words, (ex. on page 30).
2. Together teacher and students look up definitions of words and discuss how they are used. If not completed in class, students will finish on their own.
3. Review all words and their definitions. Teacher gives matching test.

1. List 10 ecology words that relate to your home environment. Explain.
2. Take one issue of the local newspaper and underline ecological terms.

Affective:

Suggests ecological words and their meanings in appropriate places in a conversation.

B.

Play Bingo game using ecology words. Pupils choose 16 words, one for each square and they print them on cards divided into 16 squares. Teacher reads definitions and pupils cover words on their cards. The winner of the first game replaces the teacher as "caller."

Skills Used:

1. Environmental words and their meanings.
2. Using these words.

CONCEPT NO. 4 - Water

SUBJECT Language Arts, Social Studies, Science

ORIENTATION Water Pollution

TOPIC/UNIT Water Pollution Purification - European Explorers - Letter Writing

BEHAVIORAL OBJECTIVES

Cognitive:

Demonstrate two ways to purify water.

STUDENT-CENTERED LEARNING ACTIVITIES

In-Class:

Outside or Community:

- A. The student will investigate, through research, several methods of purifying water.
- B. The student will use two of the methods to purify a sample of water.

A. Library research:

- 1. Who was Ponce de Leon?
- 2. Trace his route of exploration.
- 3. What was he looking for? Why?
- 4. Where did he find it?
- 5. What was it supposed to do?

Affective:

Support a concern for conservation of natural water supply with verbal statements.

- C. Find on map cities that are located near bodies of water. Note their populations. Find cities not located near water. Note their populations.

- C. Visit local water department to see how water is "purified" for city use.

Compare:

Why did people settle near bodies of water? (transportation, water supply, economic reasons, etc.)

(Continued)

Environmental:		Integrated with:	
CONCEPT NO.	4 - Water	SUBJECT	Science
ORIENTATION	Water Pollution	TOPIC/UNIT	Water
BEHAVIORAL OBJECTIVES		- STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	Describe ways man pollutes his water supply. Explain the effects of pollution on living organisms in a discussion.	In-Class:	Outside or Community:
Affective:	Support the need for treating community drinking water supplies with chemicals that will destroy harmful organisms or test the purity periodically to assure drinkable water that is not harmful to the individuals.	A. Bring to class two pure containers of water. One should contain drinkable water in which you have placed a gold fish, tadpole, or some other creature which survives in water; the other should contain water in which bleach or other chemical which will kill the fish once he is placed in it (but will not change the appearance of the water). Questions: 1. What do I have here? 2. Does it matter from which container I drink? Why? 3. Who would like to conduct an experiment? Have a student volunteer to transfer the fish from one container to the next. As soon as the fish is placed in the water, it will begin to struggle and die. They may want to take him out, but this will also get the point across. (Continued)	
Skills Used:	1. Observation 2. Show and Tell Skill 3. Writing skill

Environmental: CONCEPT NO. 4 - Water ORIENTATION Water Pollution		Integrated with: SUBJECT Science TOPIC/UNIT Water Pollution	
BEHAVIORAL OBJECTIVES Cognitive: Describe types of impurities left after evaporation of water samples collected from at least three sources in terms of a. plant characteristics b. animal characteristics c. chemical solution characteristics Affective: Suggest that water pollution is sometimes responsible for the shortage of our water resources which supplies needs for food, recreation and life.		STUDENT-CENTERED LEARNING ACTIVITIES In-Class: 1. Where did you find samples? 2. What do you see? 3. How do you think impurities got there? 4. Would this be harmful to you? Outside or Community: A. Have students collect in a jar some water from different places in your community (streams, ponds, puddles and gutters); shake up the samples and place a tsp. of each in a separate dish. Let the samples evaporate. Then look at the dishes. B. Ask the Fish and Game Warden to speak to the class on the need for pure water for living organisms. C. Ask fathers and neighbors who work in industry to speak to the class on what the company is doing to cut down on pollution. D. Ask Sanitary Water Engineer to explain how water is purified for human consumption.	
Skills Used: 1. Measuring 2. Collecting 3. Observing			

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<u>Publications:</u> Teacher's Curriculum Guide to Conservation Education, Nat'l Wildlife, Feb.-Mar. 1971, pp. 26-28, 43-46. <u>Audio-Visual:</u> Wise Use of Water Resources (color), 14 minutes, V.W.F. <u>Community:</u> Local streams, lakes, ponds, rivers, etc. Lena Environmental Group (will send speakers to school)	<u>QUESTIONS FOR DISCUSSION</u> 1. Is their drinking water safe? 2. Why do you think so? 3. Has it been used before? 4. What has happened to make it safe? 5. Why is some water not fit to use? 6. What do we mean by "polluted" water? Tie this lesson with Art Lesson for Concept #4. (Monochromatic painting)

Environmental:		Integrated with:	
CONCEPT NO.	4 - Water	SUBJECT	Mathematics
ORIENTATION	Water Conservation	TOPIC/UNIT	Large numbers - Measuring - Graphs
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:		In-Class:	Outside or Community:
Compute daily amounts of water used in their homes, community, and local industries from information collected from each source.		A. In small groups work together on these problems: 1. If the average American uses 60 gallons of water a day, how many gallons is this per week? 2. If the community must produce 150 gallons per person per day, how much is this in your community per day? Per week? Month? Year? 3. Measure how much is needed for a shower. 4. The paper industry uses 90,000 gallons of water for one ton of paperboard. How many gallons are needed for one pound of paper? 5. For 53,000,000 tons per year, how many gallons of water are used?	A. As a home experiment in saving water, try the experiment from publication Pollution, p. 34. (See next page.) B. List the various uses of water in your home. Select one way in which the members of your family can conserve water, and after two weeks report to the class. C. Draw a poster or cartoon on water conservation. (Post in school corridor.) D. Collect magazines or newspaper articles which include statistics on use of water in homes and industry. E. Find the water meter in your home with the help of your mother or father. Learn how to read it. Copy it on paper and bring to class. It would be interesting to compare a water bill from this year with one from last year. Are we using more water? Why? List 10 things we can do to cut down on the use of water.
Affective:			
From studying statistics and solving problems, make at least one change in his home on conserving water after studying statistics gathered on how water is currently being used.			
Skills Used:			
1. Large numbers 2. Problem solving 3. Graphs 4. Measuring

Community:

Environmental:		Integrated with:	
CONCEPT NO.	5 - Air	SUBJECT	Mathematics
ORIENTATION	Air Quality	TOPIC/UNIT	Computation and Averaging
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	Demonstrate a method for recording data and computing estimates of air pollution causes and amounts within a community.	In-Class:	Outside or Community:
Affective:	Promotes the use of car pools to parents and neighbors as a way of reducing air pollution.	A. Use a stop watch and ask children to count the number of breaths taken in one minute. (This will be from 14-18.) Compute the average number of breaths taken by the average class member in an hour; in a day. B. Compute Problem When the sulfur dioxide content of the air in New York City rises about .2 parts per million, 10 to 20 people die as a result. In the 5 years, 1965 to 1970, sulfur dioxide reached this level once every ten days. 1. What was the minimum number of people who died in New York City during the five years, 1965 to 1970, as a result of air pollution by sulfur dioxide? 2. What was the maximum number of people who died in New York City during the five years, 1965 to 1970, as a result of air pollution by sulfur dioxide?	A. Take the class to a moderately busy intersection in the neighborhood. 1. Have one group of children count all cars that pass in a 10-minute period. 2. Another group counts trucks and buses. 3. A third group counts any vehicle emitting visible pollution. (This will be done quietly using tallies on paper instead of voices.) 4. Car pools vs. one passenger cars. B. On returning to classroom, present an impromptu math lesson to determine the proportion of cars visibly polluting the air. Make a rough estimate of cars in community and again figure proportion.
Skills Used:			
1. Collecting data 2. Taking averages 3. Computing averages 4. Estimation 5. Predicting

ORIENTATION Unequal Resource Distribution

TOPIC/UNIT Measurement and Comparing Numbers

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Demonstrate one procedure for determining the depth of topsoil and subsoil. Describe the differences in the depths of topsoil and subsoil in each of the following:

- a valley
- flat plain
- hillside

Affective:

Suggest that the low, high productivity of a given region may be related to the shallow; great depth of the top soil of that region.

Skills Used:

- Observation
- Research
- Comparing
- Measuring
- Concluding
- Using rate pairs

A. With a soil auger borrowed from the Soil Conservation Service, the class will bore soil samples from a local hillside and from a flat plain or valley below and measure the depth of the topsoil in inches. Record the depths; samples may be taken in sufficient number so that a representative soil depth for each area will be determined.

B. Measure length of grass or some species of plant growing on thick and thin topsoil areas.

C. After it is completed the child will determine type and yield of plant growth possible for a geographic region and how these affect growth of plant and food resources available to man.

D. Compare types of soil with their productivity using maps.

E. Go to an experimental field in the area and measure the size of the various kinds of corn; of the fertilizers or lack of fertilizers.

F. Invite a soil conservation service representative to compare soil depths and types in county and state, and discuss with class how crops and cropping systems are dependent on depth and type.

Art - Social Studies

ORIENTATION

Resource Distribution and Conservation

TOPIC/UNIT

Mobiles, Recycling, Bartering

BEHAVIORAL OBJECTIVES

Cognitive:

Construct a free hanging mobile which properly incorporates the principles of balance.

STUDENT-CENTERED LEARNING ACTIVITIES

In-Class:

Outside or Community:

Affective:

Develop a visual sense of balance by developing mobiles that are balanced or by identifying those of others that are not balanced.

Skills Used:

1. Basic construction and principles of the mobile.
2. Art History Awareness
3. Observation
4. Balance Techniques (Continued)

I. Art

- A. Compare the importance of nature's balance to the importance of a mobile's balance in its construction. Students can brainstorm and come up with 2 or 3 ecosystems and talk of their importance and also experiment with balancing mobiles.

1. Discuss and illustrate the basic principles of the mobile. (Use Calder examples.)
2. Using actual items from nature or just nature shapes made out of paper or lightweight metal, have the student construct a mobile.
3. Stress that shapes should be related, not just a haphazard assortment.

B.

- Make something new from a throw-away item. (recycling)
Show class how you've converted it into a usable item. Make a display.

C.

- Pupils bring one to three items from home that are in good condition but they don't want anymore.
(Continued)

Propose a hypothetical question to the groups. "What effect will a doubling of the population have on your community?" Let the groups again work together and list possible effects. Later the groups report their results. more crime polluted water schools overcrowding lack of adequate parks lack of adequate parking facilities overcrowding in housing, etc. more pupils per teacher F. "What are some possible solutions?" conserving recycling driving at lower speeds marrying at later years smaller families mass transit car pooling, etc. educating

Environmental:

Integrated with:

CONCEPT NO. 7 - Land Use

SUBJECT Art and Social Studies

ORIENTATION Population Density and Land Use

TOPIC/UNIT Relief

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Describe the effect of density on different types of neighborhoods and make a judgment as to whether the effect will be positive or negative.

I. Art

A. Paper relief (Paper is pierced so that forms may stand (protrude) from the paper.) (Example on back.)

I. Social Studies

A. Field trips into various types of neighborhoods.

B. Students bring in pictures of various types of neighborhoods.

C. Field trip to industrial sites.

Affective:

Demonstrate awareness of different types of neighborhoods and the effect of density on them by finding examples of each within his community. Defend a given change as having either a negative or positive effect on a particular type of neighborhood.

1. Divide class into groups. Student in the various groups are responsible for depicting different types of neighborhoods by drawing and then cutting scenes in their papers.

a. Rural

b. Small town

c. City

d. Large city

e. Harbor town

f. Industrial cities, etc.

2. Density can be studied by giving students a specific number of people or houses to cut into their sheets of paper. Example on back.

3. Instruct child to cut a house, then a person, now another person, 3 children, a dog, a new baby, etc.; soon there is no room in "yard."

Stress population growth and density.

Skills Used:

1. Cutting (piercing) and folding
2. Use of stencil knife
3. Drawing
4. Observation

SUBJECT

Art

ORIENTATION

Changing Land Use

TOPIC/UNIT

Sculpture - Shadow Box Dioramas

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Construct a diorama of before and after scenes that illustrate changes in land or water use, that have occurred over a period of years, for which man has been responsible. Judge whether the change has been beneficial or harmful and give the basis for his decision.

In-Class:

Outside or Community:

- A. "Before" and "After" scenes of a given area using a shadow box diorama.
- Examples:
1. A woodland becomes a suburb.
 2. A clean lake becomes a polluted over-populated -tourist trap.
 3. A rural area becomes a large city.
 4. A junk yard is cleaned up.
 5. A cart trail becomes a freeway interchange.
 6. An Indian canoe is replaced by an ocean liner.
 7. A parade route before and after the parade. (litter)

Affective:

Promotes the idea that change of an environment, by man, can be accomplished for the benefit of man without destroying the environment if man includes the effect on the environment in his planning.

Skills Used:

1. Use of multi-media materials:
 - a. Found objects
 - b. Glue
 - c. Paper
 - d. Shoe boxes
2. Cutting
3. Construction of a diorama

Demonstrate the use of natural materials in making a creation, (sculpture, painting, collage) that can be used to communicate a given message. Compare the use of natural and man-made (Continued) Affective: Choose to use natural materials instead of commercial art materials in the creation of objects, paintings, etc. that can be used to convey messages or provide aesthetic value.	In-Class: I. Art A. Man's environment can be seen as a storehouse of materials which may be used in his artistic creations. 1. These materials can be found in the air (Example - wind makes the mobile move), water (Example - shells may be used for jewelry), the earth (Example - rocks may be used for sculpture) and the environment's populations (Ex. - sheep's wool for weaving). 2. Look around your site. What materials do you see that might be used for artistic creation. 3. Which may be used without damage to the environment? What varieties can be created that will make the environment more pleasing? a. Find such materials and create.	Outside or Community: I. Art A. Take an exploration field trip. Find materials which may be used for artistic creations. B. Make a chart: (See back of page.) C. Exploring and observing habitats of animal life. 1. Ask following questions: a. What animals would you expect to find in this area? b. Are they vertebrate or invertebrate? c. What are the needs of these animals? d. Where do the animals live? Work in small groups. They should record this information. a. Record animals that you actually see. b. List evidence (signs) of animals (homes, nests, feathers, excrement, partly consumed food, etc.). c. List habitats for wild-life (grass, cultivated field, hedges, swamp, etc.). d. List animal foods in area (plants, bark, berries, etc.). (Continued)
Skills Used: 1. Exploration 2. Discovery 3. Use of Imagination 4. Classifying 5. Making a chart 6. Using adjectives

WHO WAS HERE?

An out-of-doors animal ecology
exercise for grades 2-5 based
on:

Concept #2 All living organisms interact among themselves and
their environment, forming an intricate unit called
an ecosystem.

and

Concept #3 Environmental factors are limiting on the numbers of
organisms living within their influence. Thus, each
ecosystem has a carrying capacity.

We all know that animals are fun to see. We also know that
animals often are hard to see. Sometimes we can tell that an
animal was in a place by the signs he left. Many times we can
tell what kind of animal was there because of the kind of sign
he left behind.

There are many, many kinds of animals which leave signs.
Some are large like deer and raccoon. Some are very small like
insect grubs, spiders, and beetles. You probably have never even
seen a lot of them when they were right under your nose while you
walked in wild places.

There are so many kinds of animals. This is important
because they all have something to do. They are a part of nature.
They help keep nature working. Each kind is needed somehow.
Learn not to jump or scream if you see some of these animals.
Remember they are doing their job to keep nature in balance.

There can only be just so many of each kind of animal in any place. These animals need homes and food. As you study the tracks and traces of animals, look for their homes. Look for food for the animals. Remember that homes and food must be protected so that animals can survive.

Supplies Needed

Exercise sheet, cardboard pad or clipboard, pencil, ruler

What to wear

Old clothes, old shoes. Dress warmly if it is cold outdoors. This exercise can be done in the winter.

Where to go

Almost any field area where trees, shrubs, tall grass and other natural vegetation is present. Parks with trees and bushes may be suitable. Undeveloped areas and vacant lots may be used.

Grouping

Divide students into groups of four and assign field duties as named in the exercise sheet. You may obtain the help of a parent with an interest in nature to assist you in the field.

Preparation

Teachers using AAAS science will find that this activity can be incorporated into the lesson on animals at the 3rd grade level. Teachers using other science series should incorporate this field exercise into a unit on animals at the 2nd, 3rd, 4th or 5th grade level.

Use films, slides, filmstrips, kits, poster kits, etc. as preparation for what may be discovered. Discuss beforehand the importance of observation techniques. Contact Project ICE for audio-visual resource material listed in the Project ICE Resource Bibliography.

BEST COPY AVAILABLE

BEST COPY AVAILABLE

Field Use

Different sections of the exercise may be done simultaneously when appropriate. Stress the discovery process. Let the children find out for themselves. Leave some things unanswered until they do follow-up research from resource materials in the classroom or IMC. Give one exercise sheet for "Who Was Here" to each student. Assign the sections of the exercise which are appropriate for use at your field site. Explain which discoveries go into each page of the exercise sheet.

Follow up

Obtain resource materials from the IMC. Have the students obtain information from the resource materials after the field trip.

Use the information gained for special projects such as:

- Art projects
- Reports
- Discussion session
- Spelling words

Be sure to stress the concept themes in the follow-up work. Use the food chain idea. Incorporate sound conservation ideas into the follow up.

EXERCISE SHEET FOR WHO WAS HERE

Student _____

Grade _____ Date _____ Team Number _____

Animal Survey Team (team number _____)

Wildlife Biologist _____

Wildlife Technician _____

Game Manager* _____

Game Warden _____

*The Game Manager is the head of the survey team. He or she must report the findings of the survey to the District Director (your teacher) and the class.

Directions:

Each 4-member team will do the sections of the exercise assigned by the teacher. The students are to observe carefully and to write in their reports in the proper space. Each person should write in his or her observations. The survey team should discuss their findings. The Game Manager in each team should report the results of this discussion during the follow-up session. The exercise sheet should be turned in to the teacher at the end of the survey.

Activity #1

Animals Seen

Find out how many different kinds of animals you can see in five minutes time. Each team should pick a spot for looking. The team should look in every direction from their spot. Count every kind of different animal you see. Put an "X" in the boxes under the right place for every different animal kind which the team sees.

a. Flying Animals

Four legged animals

Crawling animals

Hopping animals

Resting animals

- b. Write down as many names of these animals as you can.
(Students may fill in this section while doing other sections in the winter time.)

Animal Names

Nest and Hole Study

a. Nest count. Put an "X" in a box for each different nest seen.

[illegible]

How high were the nests you measured? _____

- c. Hole count. Look all over on the ground and in the trees for holes. Place an "X" in a box for each kind of hole.

[illegible]

Where were they?

- e. Measure the different kinds of holes in the ground. How big are they?

Hole 4 _____ Hole 5 _____ Hole 6 _____

Activity #3

Small Animal Study

Look at the bark of trees for traces of small animals. Look in other places. What do you find in each?

- a. Bark of trees
- b. Under bark of dead wood
- c. Inside dead wood
- d. In or next to stumps
- e. On the ground
- f. In the snow
- g. Other places

BEST COPY AVAILABLE

Activity #4

BEST COPY AVAILABLE

104i

Symphony of Nature

- a. Sit for five minutes and listen. How many different animals can you count because of the sound they make? Put an "X" in the box for each sound.

Birds

Insects

Four legged animals

Man sounds

- b. Name some of the animal sounds

Activity #5

The Traces of Man

Look around for as many signs of man in your animal world. Be careful not to leave any sign of yourself in this place.

Good man signs

Bad man signs

What are some of these signs?

Environmental:

Integrated with:

CONCEPT NO. 9 - Management

SUBJECT Science - Math - Social Studies

ORIENTATION Soil Management

TOPIC/UNIT Water/Soil Conservation - City Planning

BEHAVIORAL OBJECTIVES	STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	In-Class:	Outside or Community:
Describe factors, that when changed will either increase or decrease the absorbercy rate of the soil. Demonstrate the effect of a given change of one of the factors regulating the absorbercy rate, on the absorbercy rate, through a graph of the data before and after the change occurred. Prepare a graph of absorbercy rates of each of the soil types (continued)	I. Science and Math A. Soil Perculation Check 1. Obtain six tin cans that are the same size. Campbell soup cans are ideal. 2. Remove the tops and bottoms from five of the cans. Place a mark on each of five, 1/2 inch from a rim. 3. Press a can 1/2 inch deep (use the mark as a guide) into each following soils: a. clay or loam b. sandy soil c. rich garden soil d. lawn where grass grows well e. heavily trampled path on a lawn 4. Use the sixth can to pour a full can of water into each of the others. This activity should be done on the same day so that you can be reasonably sure that the amount of water in each type of soil is, to some extent, the same. Start timing the rate of absorption as soon as you start to pour the water. (Continued)	I. Science and Social Studies A. Have local plumbing inspector demonstrate a "perk-test" on the school site. B. Have local contractor or city engineer explain to the students how soil type influences construction of buildings and other structures. Go into the forest. C. 1. Divide pupils into groups of 4 or 5. Have them predict what they will find in the top few inches of the forest floor. List their predictions. Stake out an area 2 or 3 feet square. Sift through top 3 inches. Teach litter (identifiable dead things on surface), <u>duff</u> (partially decomposed organic matter compacted), <u>humus</u> (almost completely decomposed non-identifiable organic matter). Group classifies things in one of these 3 categories. Groups report to class gathering their finds. 2. Have groups feel soil samples. They push and rub moistened soil between thumb and forefinger. (Continued)
Affective:		
Demonstrate awareness of differences in absorbercy rates of different soils and conditions and investigation of soil types around schools and home.		
Skills Used:		
1. Carrying out an investigation a. constructing equipment b. collecting data c. organizing d. drawing conclusions

CONTINUED OR ADDED LEARNING ACTIVITIES

COGNITIVE: (Continued)

that will indicate the relationship between soil type and absorbercy rate.

CLASSROOM: (Continued)

- A. 5. Start timing when no more water remains in the can. In some soils you should be prepared for a long wait.
6. Record for each can, the location, the appearance of the soil, one (size of particles, texture, ingredients, etc.) and the time required for the water to be absorbed by the ground. Show the times on a bar graph.
7. Discussions! Which soil absorbed water the fastest? the slowest? Which soil would produce runoff most easily? What factors seemed to contribute to the rapid absorption of water by soil?

OUTSIDE: (Continued)

- C. 2. If it feels gritty. . . . sand. If it feels smooth and stick, not very sticky. . . . silt. If it feels smooth, plastic, very stick . . . clay.
3. Have pupils complete this chart by experimenting to find water holding capacity and looseness of soil. The chart should look like this:

Type of Soil	Water Holding Capacity	Looseness of Soil
Sand	poor	good
Silt	good to excellent	good
Clay	high (plants can't use it in clay)	poor

Environmental: CONCEPT NO. 10 - Economic Planning ORIENTATION Resource Conservation		Integrated with: SUBJECT Language Arts TOPIC/UNIT Writing an Account, Keeping a Log	
BEHAVIORAL OBJECTIVES Cognitive: Describe changes that have occurred and predict changes that will probably occur in a tree, based on the information recorded about the growth and characteristics of the tree over a period of time.		STUDENT-CENTERED LEARNING ACTIVITIES In-Class: A. 1. With the aid of Park and Recreation Department of the City, or tree surgeon, teacher would find out when and where a tree in the city is to be taken down. 2. Take class to tree site and do a creative writing experience using the senses--sight, sound, smell, touch, and taste. 3. Do not inform class that tree is to be cut down. 4. Return to tree site after tree has been removed. The child again reacts to the site in creative writing.	
Affective: Compose a writing that demonstrates the loss to the environment when a healthy tree is cut down, that can be shared with others in the class.		Outside or Community: <u>Adopt a Tree</u> Each pupil "adopts" a tree on the school site (or very near). Pupils do research on the tree. Records are kept in a booklet. At certain times, maybe once a week, the height, circumference of tree, color of leaves, number of limbs, and other observations are recorded with the date. Also, four drawings of the tree, one for each season, is put in the notebook. A tag is placed on the tree, with name of tree and the child who adopted it. See p. 74 for way to determine height of tree, circumference and diameter. Bark texture can be pictured by bark rubbings. Pupil uses a piece of paper and a wax crayon to make bark rubbings of bark. Is bark all the same color? During early spring, select one branch of your tree to study. Record changes until branch is fully leafed out. "Did the branch produce flowers before or after the leaves first appeared?"	
Skills Used: 1. Discussion 2. Writing 3. Making comparisons 4. Keeping a log 5. Observation

Environmental:		Integrated with:	
CONCEPT NO.	10 - Economic Planning	SUBJECT	Mathematics
ORIENTATION	Short-Long Term Factors	TOPIC/UNIT	Decimals - Problem Solving
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	Solve simple decimal and percentage arithmetic word problems that include economic factors involving pollution. Child observes building landmarks, etc. noting observations of environmental deterioration. Compare the effects of natural environmental deterioration with that of man's environment deterioration in: a. rate of change; b. identifying characteristics.	In-Class:	A. We've used our waterways as dumping grounds for more than two centuries. The villains of the pollution of our waterways are industry 65%, municipalities 20% and agriculture 15%. 1. If only 32 states have fully approved water quality standards, how many do not? What is the percentage ratio of those that do to those that do not? 2. It will take a 5-year investment of \$42 billion to clean up water. Over half is industry's responsibility. If industries' shares are 3.2, 2.0, 4.0, 6.6, 1.0, and 7.7 billion dollars for various abatement needs, what is the total of industry's financial responsibility? 3. What is the municipal financial responsibility? 4. At present North Americans are removing fresh water from underground sources twice as fast as it can be replaced.
Affective:	Demonstrate the appreciation for the above concept from working with problems dealing with the monetary aspect of environmental losses. Observe objects that can be used to predict the environmental change that takes place over a period of time and predict how long the object will remain at a given height, depth, color, etc. (building, landmark, tombstone).	Outside or Community:	A. Take a field trip to the nearest "large city." Observe the effects of various acids in the atmosphere that are damaging buildings, landmarks, and works of art. Can old landmarks and buildings be restored or must they be replaced? Some of these buildings are, in reality, irreplaceable. B. Go on the school grounds or area not far from an industrial site that has plant life growing on it. Observe the upper side of the leaves for evidence of an accumulation of pollutants. The stomata are tiny openings on the underside of the leaves that afford the plant the ability to breathe.
Skills Used:	1. Problem solving 2. Reasoning; observing 3. Computing; analyzing	(Continued)

Early settler - an industrialist and farmer; why they came. <u>Commercials</u>: Interject at anytime to sell products which cause water pollution. <u>The River Today</u> - full-time resident - septic tank run off right into river. - Cottager - boats causing oil spill. - Industrialist - dumping of industrial waste.	Either visit or talk to resource person describing industrial waste. Resource person or visit to municipal sewage disposal system as relates to river. Plumber to describe septic system and proper drainage.	
Affective:			
Participate in a radio or TV production that will include acts of individuals, communities, or companies that have caused a change in a river's: - path - pollution level - navigability			
Skills Used:			
- Script construction - Play presentation - Tape recording - Role playing - Research and observation

Housewife - surface runoff (drain water from house piped to runoff in river). f. Farmer - fertilizer, insecticide runoff to river. g. Mayor - sewage disposal. Must interject to listening audience continually how this is duplicated up and down <u>The River</u>.

Environmental:

Integrated with:

CONCEPT NO. 11 - Individual ActsSUBJECT Language Arts, Social Studies, Art, MusicORIENTATION Environmental AlterationsTOPIC/UNIT Script Writing, Urban Aesthetics,Photography and Design

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Describe examples of several alterations in his community that are due to duplication of an individual act which was seemingly insignificant in itself.

In-Class:

- A. Divide class into groups of four. Each group should have a camera and film suitable for slides and 20 exposures.
- B. Take slides where there is evidence of an alteration due to duplicated individual acts within a specific area.
- C. Suggestions for photographic study:
 1. Lawn breakdown by paths from vehicles and/or pedestrians.
 2. Instances of misuse of many automobiles.
 3. Littering
 4. Graffiti (washroom writing);
 5. Over abundance of signs and billboards.
 6. Lunchroom.
 7. The bus.
 8. Waste disposal.
 9. Studded tires.
 10. Investigate parking lot and playground
 11. Fingerprints throughout building.
 12. etc.
- D. Organize slides for a multimedia presentation:
 1. Script writing and planning
 2. Tape recording
 3. Slide-tape synchronization
 4. Photography
 5. Designing title slides

Outside or Community:

Integrate with Art Lesson on Group Design in Individual Alterations for Concept #11.

Affective:

Present examples of the consequences of duplicating seemingly insignificant individual acts of pollution. Participate in a multi-media presentation which illustrates the alterations of the environment that have been due to the acts of individuals, companies, and/or communities.

Skills Used:

1. Script writing and planning
2. Tape recording
3. Slide-tape synchronization
4. Photography
5. Designing title slides

1. Script writing and planning
2. Tape recording
3. Slide-tape synchronization
4. Photography
5. Designing title slides

Record script cassette
Synchronize music
Design title and credit slides

TOPIC/UNIT Newspaper Article Writing, Urban Study,

a "What Can I do?"

Averaging, Writing Business Letters.

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Write a newspaper article using acceptable reporting techniques reporting facts and observations learned during the Stewardship Urban Study.

Affective:

Participate in a program to determine the amount and types of property stewardship practiced by the persons in a given area.

- Skills Used:**
1. Newspaper Article Writing
 2. Organizing and Collecting Data
 3. Writing Business Letters

- A. Teacher establish good newspaper reporting skills.
- B. Student will gather evidence of good stewardship practices of property owners on a city street, one block long, using the Stewardship Urban Study Guide (on reverse side).
- C. After returning to class, the student will write, using good reporting techniques, an article reporting facts and observations learned from Study Guide.
- D. Write business letters concerning ways of conserving our resources. See p. 136 for addresses. Report replies to class. Class can then decide on one project.
- E. Collect newspaper articles on conservation for 10 days. What conclusions can you make? Is the local newspaper conservation minded? What area was of most concern, air pollution? water? solid waste? Were practical suggestions being put into practice?

CONCEPT NO. 12 - Stewardship

SUBJECT Mathematics and Science

ORIENTATION Waste Disposal

TOPIC/UNIT Numeration (Multiplication)

BEHAVIORAL OBJECTIVES	STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	In-Class:	Outside or Community:
Compute the amount of waste-paper, bottles or cans, etc., which could be found in a given area based on the data of that collected in the environmental cleaning hike.	A. The class will select an area of roadside which they feel needs to be cleaned up and make preparations for an environmental cleaning hike. 1. Bring bags in which to place various types of litter. 2. Volunteer to be on a group which picks up one type of litter, (paper, cans, etc.). B. The class will determine what length of roadside they will clean up. 1. Determine how it will be measured. 2. Compute the miles of roadside in their township, county or state. 3. Based on the amount of litter picked up in outside activity, compute or multiply the tons of litter in township, county or state. Write to County Road Commissioner for mileage covered by County crews. Use town - County - road maps to get own mileage, or State offices may have figures on state highway miles.	A. Tour a measured or known length of roadside collecting various classes of waste or litter, (paper, cans, etc.) which can be weighed. 1. Record the amount of each class of waste. 2. At this rate per mile by multiplication, compute amount found in township, county or state. 3. Children living in village or city could find cost of cleanup in parks, streets, etc. 4. As a class project, organize and carry out a community "cleanup and spruce-up" campaign. B. In a vacant lot: 1. Note the kinds of litter. 2. Note the ways in which litter changes the environment: a. blocks light b. increases moisture c. makes area unsightly d. makes cleanup costly e. introduces different materials into the soil 3. "What would the lot be like without litter?"
Affective:		
Criticize actions of their own and their families. Respond favorably to the beauty of a litter-free landscape in verbal statements when comparing it to the situation before the cleanup hike.		
Skills Used:		
1. Planning 2. Observation 3. Collecting 4. Organizing 5. Computing 6. Criticizing

CONCEPT NO. 12 - Stewardship

SUBJECT Physical Education and Science

ORIENTATION

Respecting Property Rights and Being Aware of Beauty

TOPIC/UNIT Volleyball and Lead-Up Games

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

List at least 2 reasons why they should respect other people's property. Evaluate the actions of a particular person or group in a specified situation as to whether or not he/they respected the other person's property if no sign is posted; if a sign is present (no trespassing, etc.).

In-Class:

I. Physical Education

A. Volleyball

1. Assign each player to a space. Stress playing own position.

NOTE: Level of play depends on skill level of students.

B. Discussion: Student-centered - teacher-directed.

1. Why must we play our own space?

2. What would happen if we went all over the court?

3. Can we say that this space is a private piece of land?

4. What about private property - should we trespass?

5. What about other people's property - should we mark on it or destroy it?

6. When we go to a park, how should we leave it?

Outside or Community:

I. Physical Education

A.

Have a park manager relate the expense involved in repairing defaced facilities, stating also why people should respect areas designated for swimming, picnicking, camping, etc.

B. Have janitor talk to class and point out the expense of repairing damage done during the year.

II.

Science

A. Take the pupils to a spot and give them time to observe beauty quietly. Remind them that they stand in the shade of trees they did not plant, read books they did not write, etc.

"What is your responsibility for conserving beauty?"

"What can I do?"

Affective:

Respect the property and rights of other people by choosing a path or other action which does not interfere with the rights of others when presented with a situation in which a choice is given.

Skills Used:

1. Catching and throwing
2. Playing a position
3. Volleying
4. Serving
5. Teamwork
6. Sportsmanship

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<u>Publications:</u> <u>Environmental Education Concepts and Teaching Materials</u>, Cook, Gr. 4-6. <u>Interaction of Man and the Biosphere</u>, Rand McNally and Co., Chicago, Illinois <u>Audio-Visual:</u> <u>Community:</u>	

APPENDIXCAN BE USED WITH CONCEPTS 2 AND 3

BEST COPY AVAILABLE

CROWS AND CRANES

Equal number of players in two straight lines three feet apart. One team is "Crows" the other team is "Cranes." When teacher calls "Crows" they run to their goal line and Cranes try to tag them. If he calls "Cranes," Cranes run to their goal. Any player caught goes to opposite team.

CAN BE USED WITH CONCEPT 7LONG BASE

Equipment: one playground ball, ball diamond; second base is only base used.

One team is up, the other team is spaced on the playing field. Ball is thrown into field. Runner attempts to run around base and home before being hit by the ball. Once a fielder has the ball, he cannot move, but must either hit the runner or pass the ball to another player. There are three outs to an inning.

CAN BE USED WITH CONCEPTS 7 AND 9INDIVIDUAL KICKBALL

Two equal teams. Team one is up to make points, while team two players are in the field. Player kicks ball out into field and attempts to run as many bases as he can before his opponent can bring the ball to home base. One point is scored for each base. A home run scores five points.

CAN BE USED WITH CONCEPTS 6 AND 10GERMAN BOTBALL

Equipment - 2 plastic bats, one soft 8" playground ball.

Ball and bats are placed in center of playing area. Teams are lined up on each goal line. Each player on each team is given a number. When a number is called, the two players run to center and try to hit the ball over opponent's goal line. Team members cannot guard the goal. Point is scored when ball crosses goal line.

CAN BE USED WITH CONCEPTS 7 AND 11HOT ROD

Form a circle. Count off by five. Each car has his own garage. Teacher calls a number; all cars with that number run counterclockwise around the circle once back to their own garage. Last one to get back has a wrecked car so is out of the race. Player sits down in his "garage." Game continues until one car of each number is left.
